REDUCE ENERGY COSTS

Planned. Comprehensive.

The exclusive WholeHouse™ Approach to Energy Savings from **New Buffalo Impact (NBI)** is the complete solution to rising energy costs, drafty or sweltering homes, or older, energy-hogging systems.

NBI provides the processes, home energy savings experience, and home improvement expertise necessary to help homeowners cut home energy bills, improve the long term home value and return on home ownership investment, and enjoy a more comfortable, energy safe, living environment.

NBI works with homeowners to determine eligibility for energy related home improvement financial assistance. If qualified, **NBI** provides hands on help in acquiring the financial assistance.

Air conditioning, heating, windows, doors, insulation and energy efficient appliances are just some of the comprehensive products and services offered by **New Buffalo Impact**.

We use the Energy Star® Comprehensive Home Performance Assessment as the tool to design a scope of work that maximizes the performance of your home. The Comprehensive Home Performance Assessment (also called “Energy Audit”) is more than a simple inspection and estimate.

It is a detailed examination of your home’s performance and energy efficiency. One of **NBI’s** BPI-certified inspectors will perform a series of diagnostic tests, take measurements, answer your questions, and provide insight into your most cost-effective course of action.

Shortly thereafter, **New Buffalo Impact** will send you your fully completed Comprehensive Home Performance Assessment Report, listing results, recommendations, energy savings calculations, and a proposal to perform the work.

IMPROVE ENERGY EFFICIENCY

Six Key Inspections Are Performed

- *Blower Door test to determine air infiltration rates and sources*
- *Infrared scan to determine insulation levels and heat loss sources*
- *Heating system efficiency testing*
- *Combustion appliance draft testing*
- *Carbon monoxide (CO) testing of all combustion appliances including stoves, furnaces and hot water tanks.*
- *Lighting survey and electric appliance analysis*

NBI also offers a free in-home “Home Energy Improvement Needs Consultation”. And at **NBI**, the comprehensive energy audit we perform for our customers is truly free, because the small upfront audit fee is always credited towards cost of the energy saving work.

Person to Person Attention

But we’re not done. We believe in personal attention to your individual energy situation. That’s why we sit down with you and explain what all the numbers in your report mean. We’ll also discuss how to get your work on a timetable and budget that works for you.

Once you have a completed **NBI** energy assessment in hand, all of the listed recommendations are immediately eligible for incentives from New York’s Home Performance with **Energy Star**® program. We will help you understand these incentives, and which ones are best for you.

ENHANCE YOUR HOME

Financial Assistance. Guidance.

A Home Performance with **Energy Star**® program partner, **NBI** guides you through the various energy savings assistance programs and works with you to see if you qualify for energy assistance grants which can pay up to 50% of the cost of your energy home improvements.

New Buffalo Impact has years of experience in putting together financial packages for building performance work so you can get the work you need accomplished.

We have financial packaging options available for homeowners of a wide range of income levels, even including those who may fall below the federal poverty lines. Some of these options include:

- **Energy Star® Financing** - A low interest (5.99%) unsecured loan, which can be taken out on a 10 year term for super low monthly payments.
- **Energy \$mart Financing** - Like to deal with your local bank instead? They’re most likely a participating Energy \$mart lender, with extra low rates for New Buffalo Impact customers.
- **Homeowner Financing Incentive** - You can get a 10% rebate on any work that’s recommended by a Comprehensive Home Performance Assessment, should you choose not to do any borrowing.
- **Assisted Home Performance Grants** - If you are a low-to-moderate income homeowner, New York’s Home Performance with Energy Star® program will grant you 50% of the cost of the scope of work up to \$5000. That’s money you never have to pay back.
